

Muhammad Mustafa

Software Engineering Student |

CONTACT Phone: +92 332 9803406 Email: 4529.muhammad@gmail.com Address: I-10/2, Islamabad, Pakistan TECHNICAL SKILLS Language: C++ Core Concepts: OOP (Classes, Structures, Inheritance, Encapsulation) Problem Solving: Data Structures fundamentals, Competitive Programming Web Basics: HTML, CSS Tools: MS Word, PowerPoint, Canva SOFT SKILLS - Problem Solving - Communication - Team Collaboration - Time Management - Adaptability ONLINE COURSES - Shopify Website Development - Graphic Designing Basics LANGUAGES English: Conversational Urdu: Fluent Pashto: Native	CAREER OBJECTIVE Driven Software Engineering student (3rd semester) with hands-on experience in C++ and object-oriented programming, seeking a <i>Python</i> development internship to apply core programming concepts, sharpen problem-solving through competitive programming practice, and contribute to real-world software solutions in a professional environment. PROJECTS Mind Guessing Game (C++) https://github.com/Muhammad-Mustafa-ios/Mind-Guessing-Game - Built an interactive number-guessing game that generates a random target value and validates user guesses against it - Implemented loops and conditional logic to manage game state, attempt limits, and win/lose conditions - Added input validation to handle invalid or out-of-range entries, and refactored repeated logic into reusable functions Toll Management System (C++) https://github.com/Muhammad-Mustafa-ios/Smart-Toll-System - Developed a console-based toll management system to simulate vehicle entry, classification, and fee calculation - Applied core OOP principles (classes, encapsulation, inheritance) to model vehicle types and toll rules - Used arrays to store and process multiple vehicle records and structured the program into modular functions for input, calculation, and output, strengthening real-world problem-modeling skills Basic Website (HTML/CSS) - Designed and built a responsive multi-section website using semantic HTML and CSS - Structured layouts for consistent spacing and alignment across sections - Applied styling fundamentals (typography, color contrast, whitespace) to improve readability and overall user experience Competitive Programming Practice https://github.com/Muhammad-Mustafa-ios?tab=repositories - Regularly solving algorithmic problems in C++ to build speed, logic, and time-complexity awareness - Focused on core building blocks - loops, arrays, recursion, and basic data structures - as a foundation for stronger competitive programming and interview-style problem solving EDUCATION BS Software Engineering (3rd Semester) Bahria University, Islamabad, Pakistan Relevant Coursework: Programming Fundamentals, Object-Oriented Programming
